Introduction

- » Olesen et al. (2009):
 - » Limitations of current building downwash models, especially close to the buildings.
 - » Interesting dataset by Thompson, not fully exploited
- » Development of new building downwash routine (Cosemans et al., 2012)

Model description

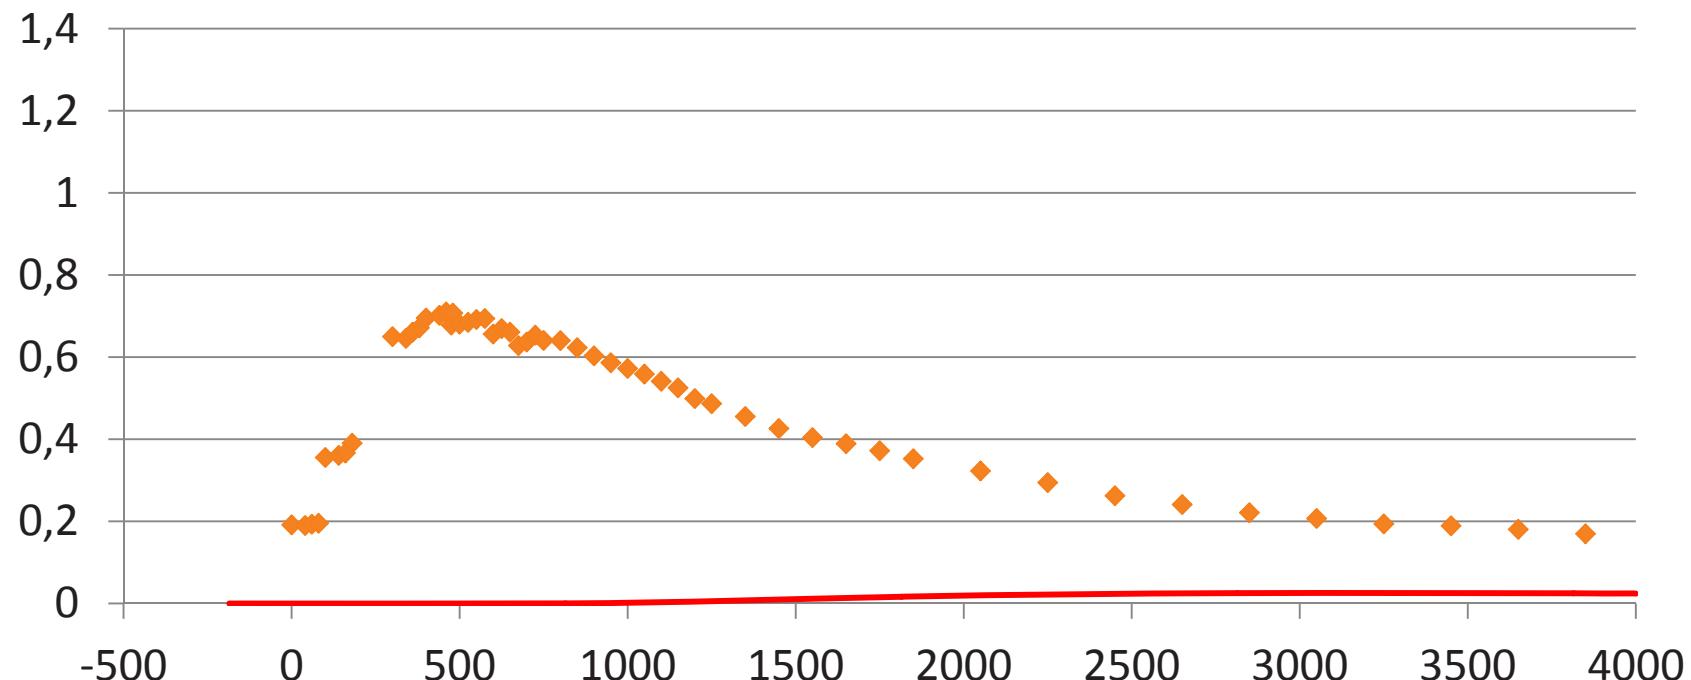

Cosemans et al., 2012

Model description

Cosemans et al., 2012

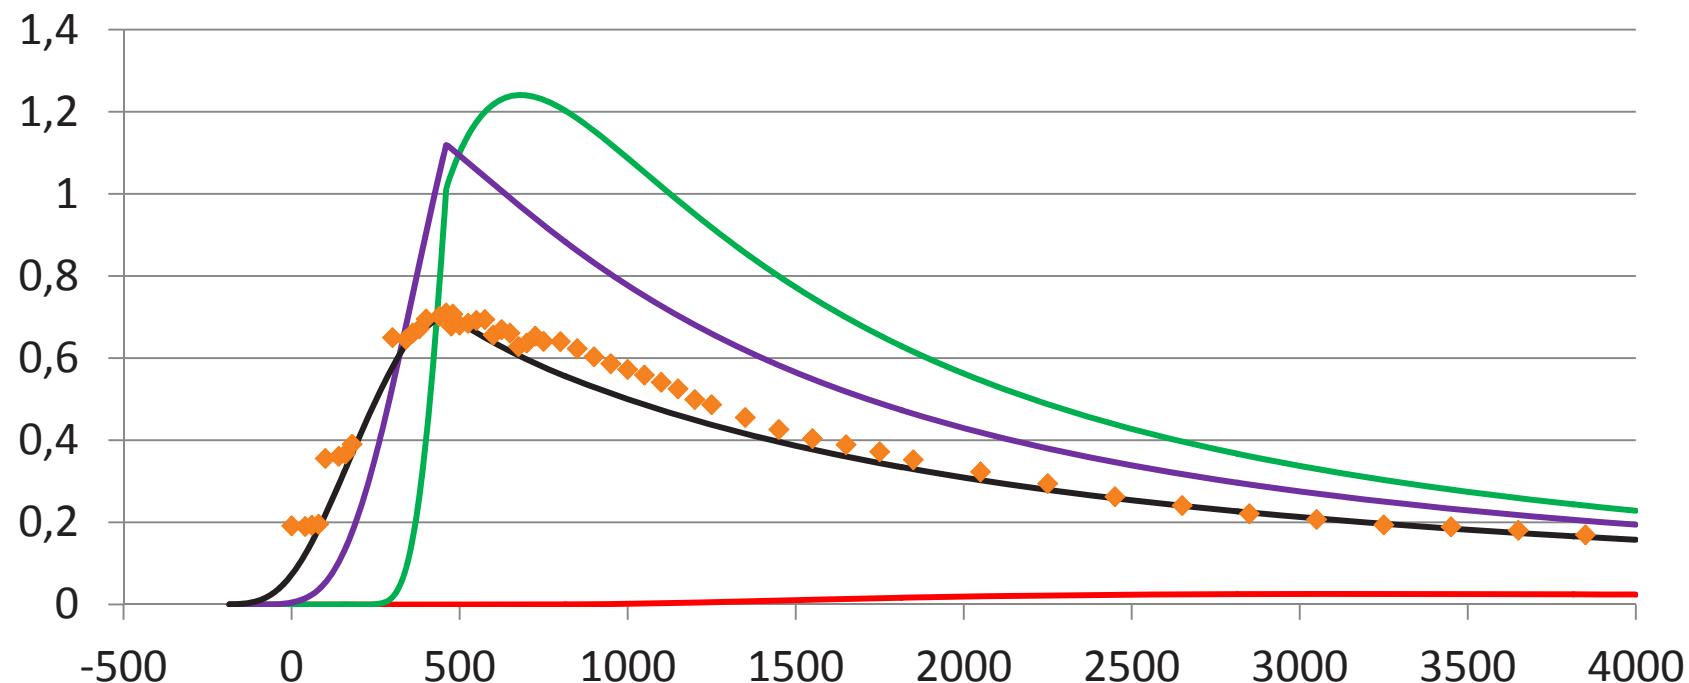

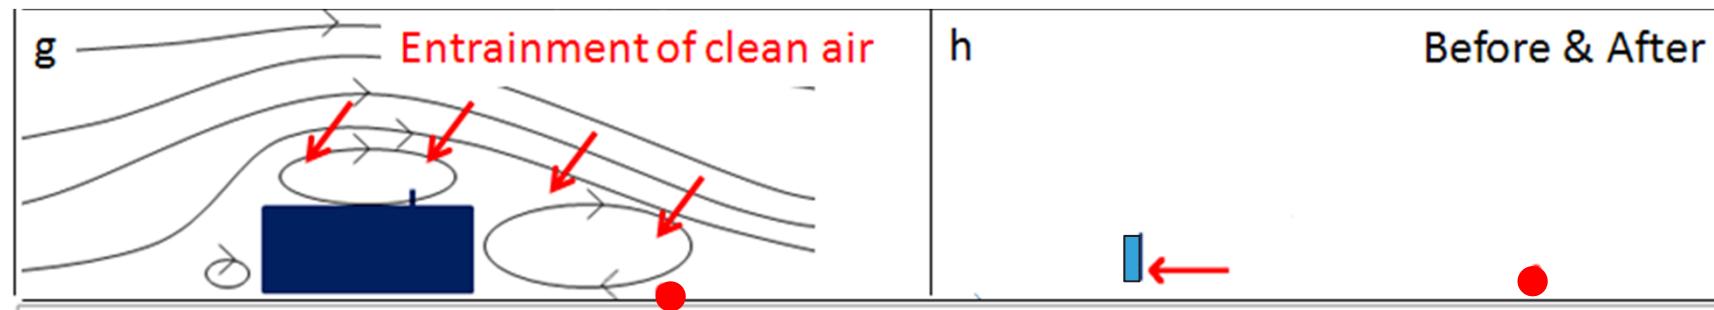

Model description

Cosemans et al., 2012

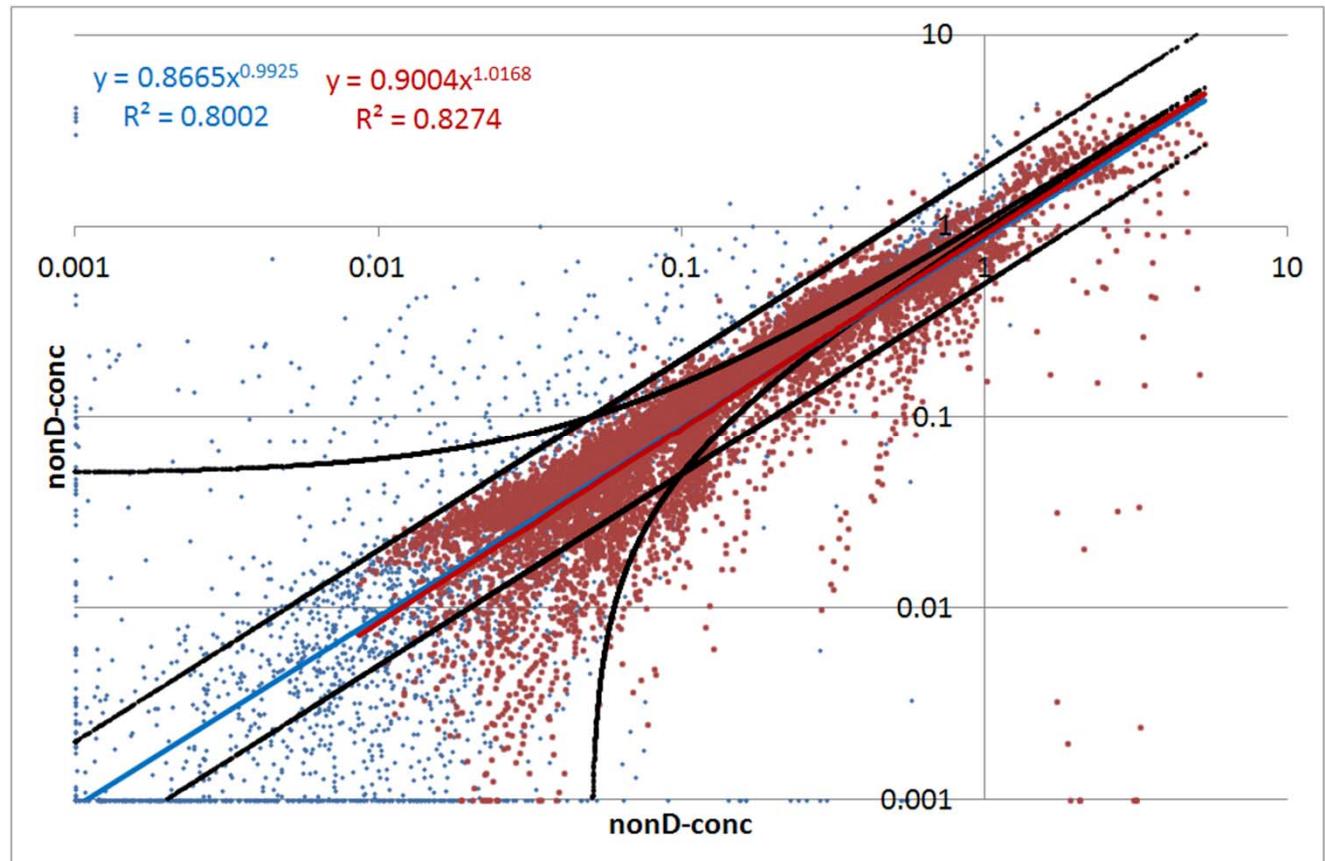

Model description

- » It reproduces the Thompson dataset

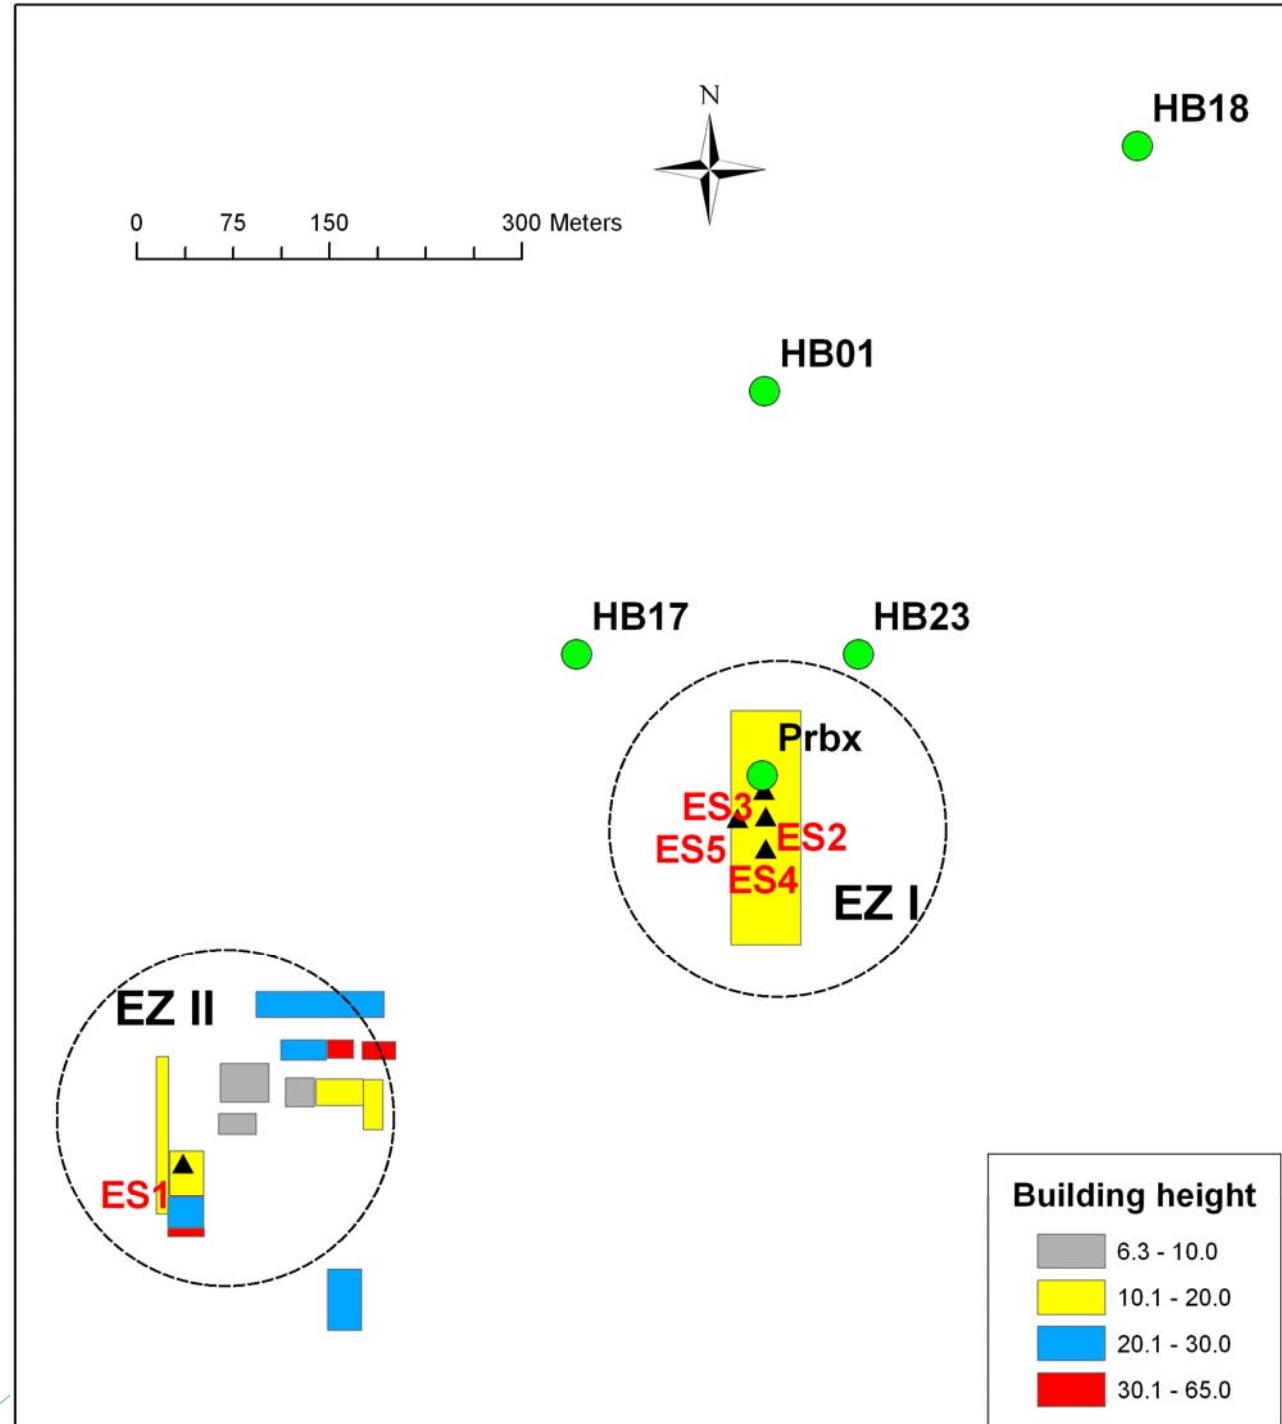

- » But also reality?

Field data

Daily measurements
at four locations
close to the sources
During 2 years (2010-2011)

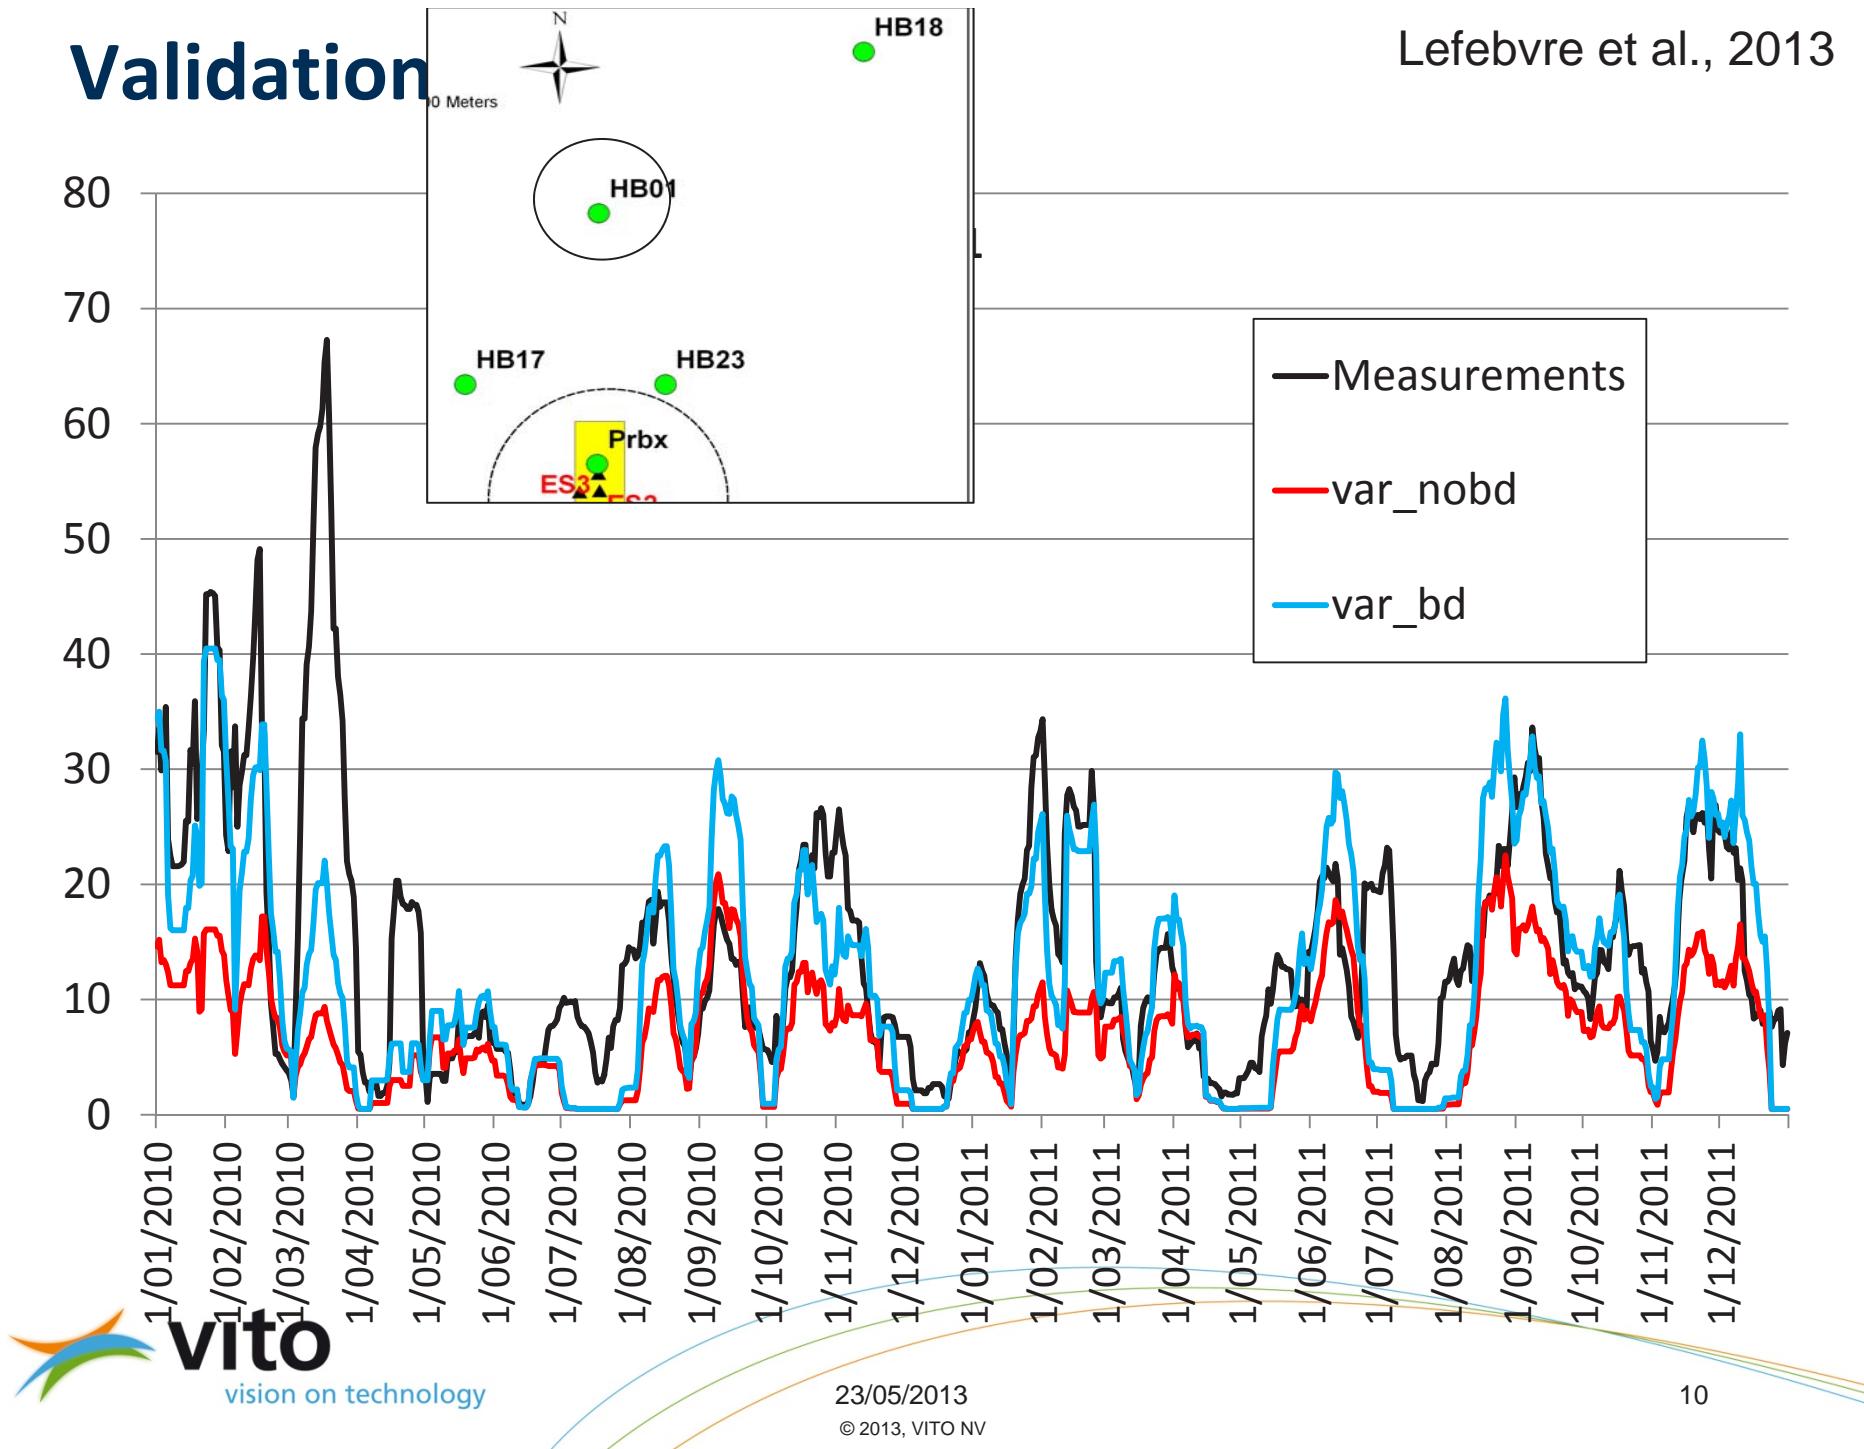

Two zones with emissions

Simulations:
•With building downwash
•Without building downwash

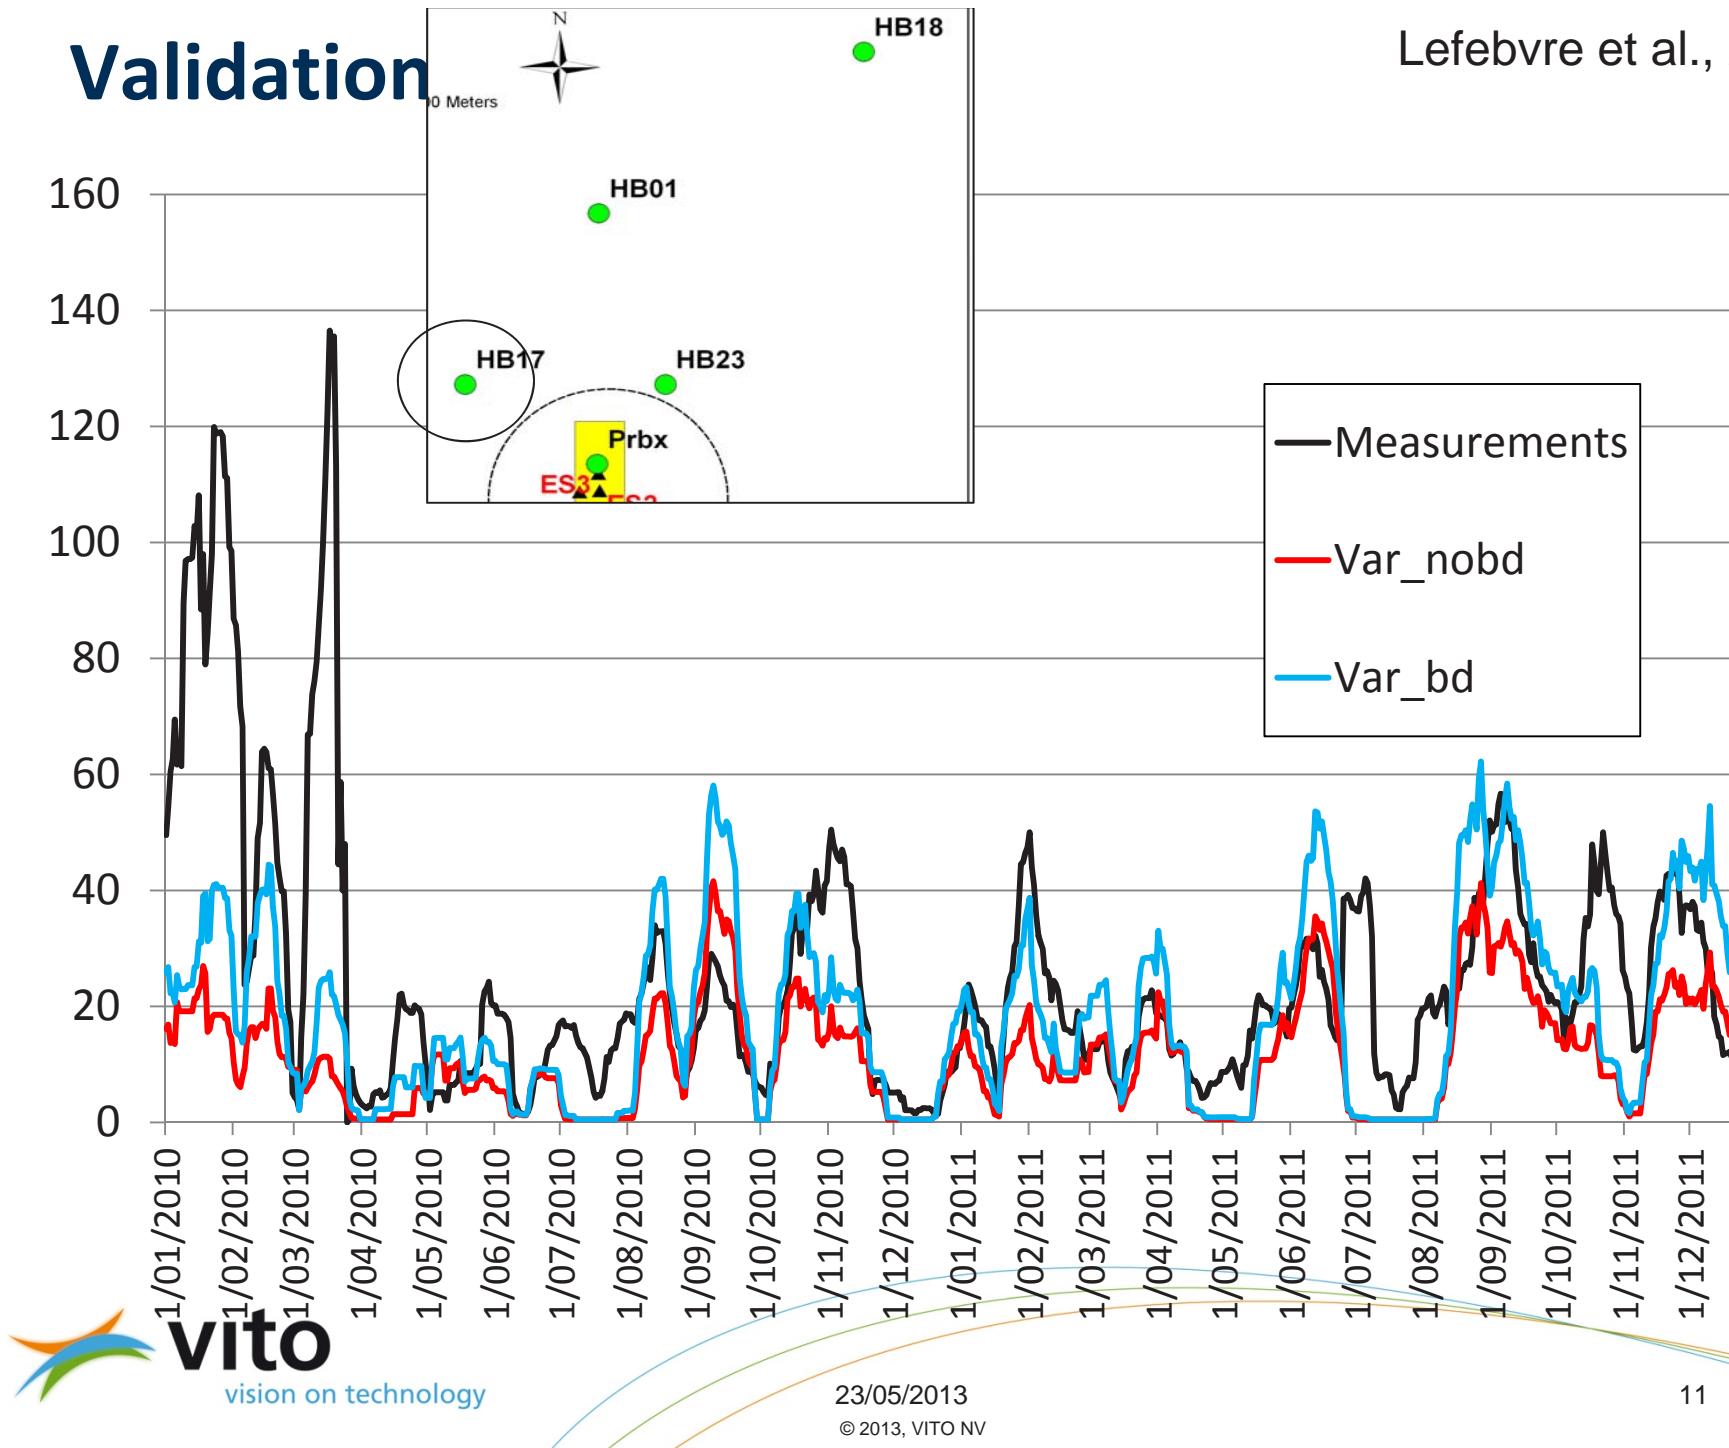

Validation

Lefebvre et al., 2013

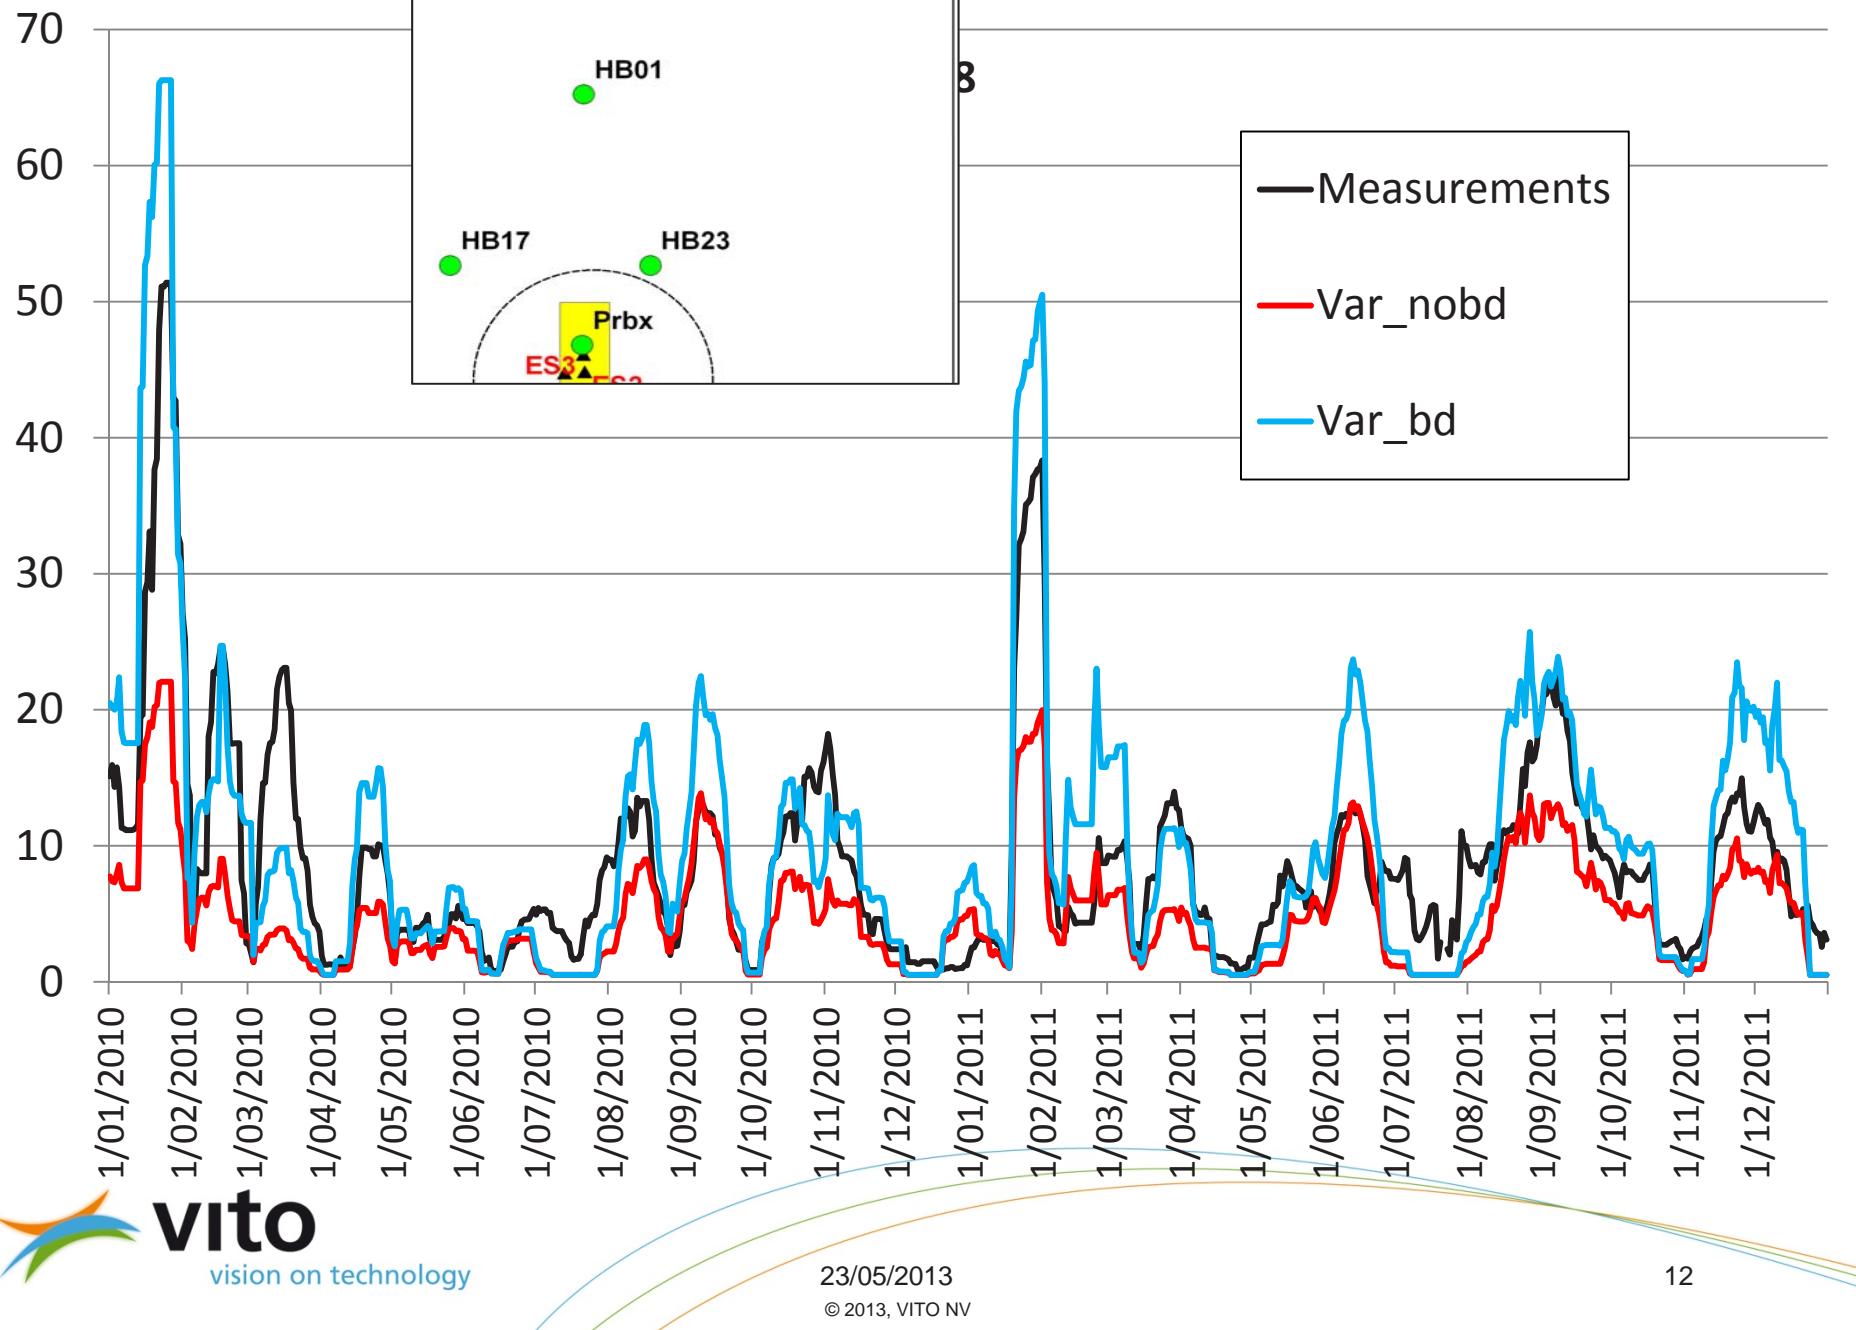

Validation

Lefebvre et al., 2013

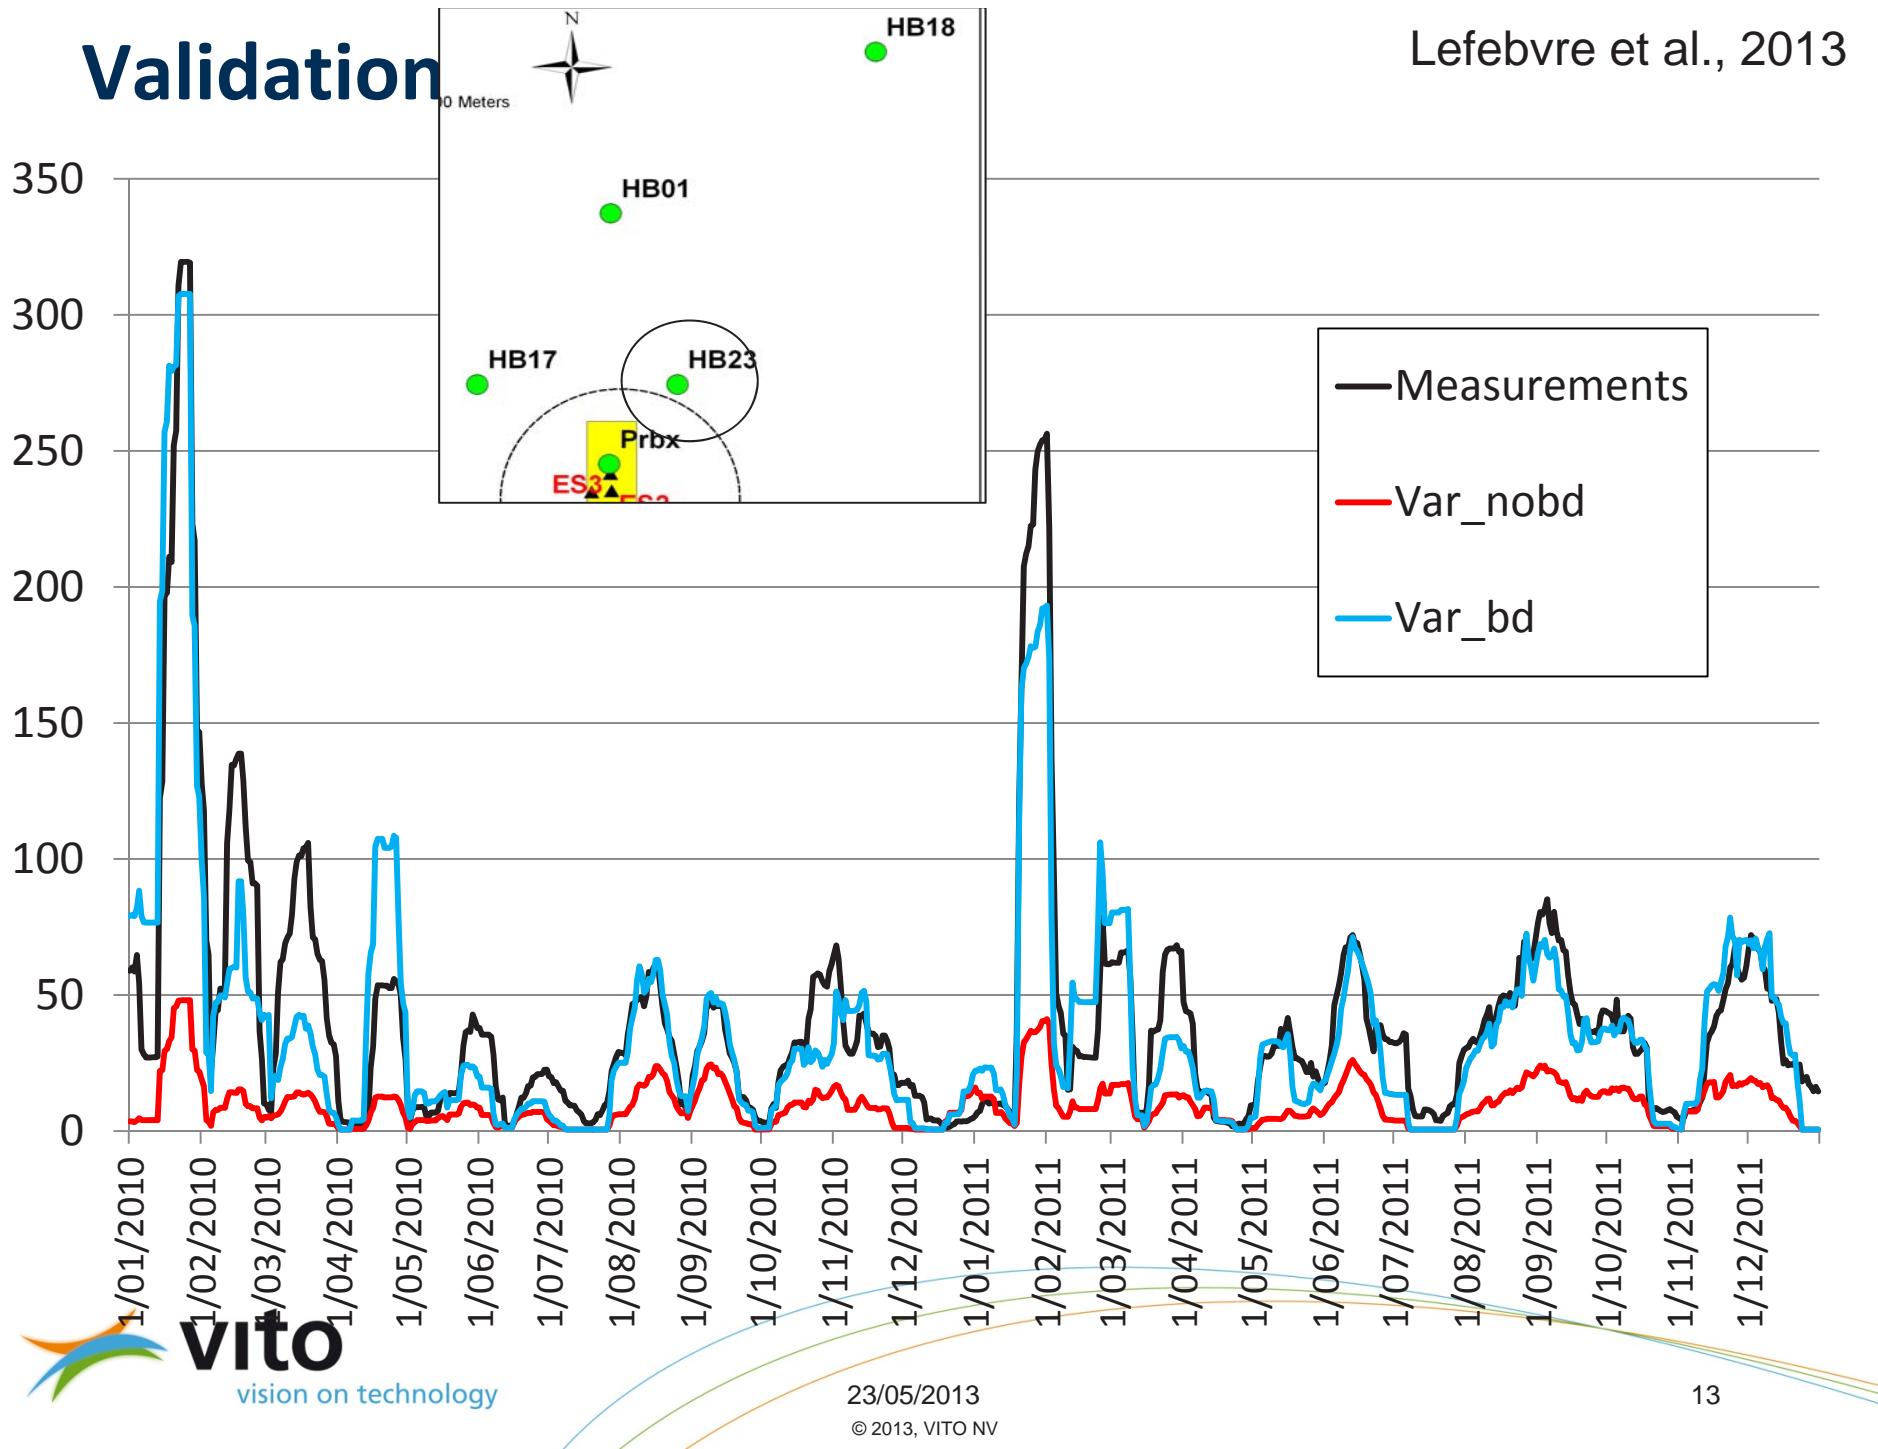

Validation

Lefebvre et al., 2013

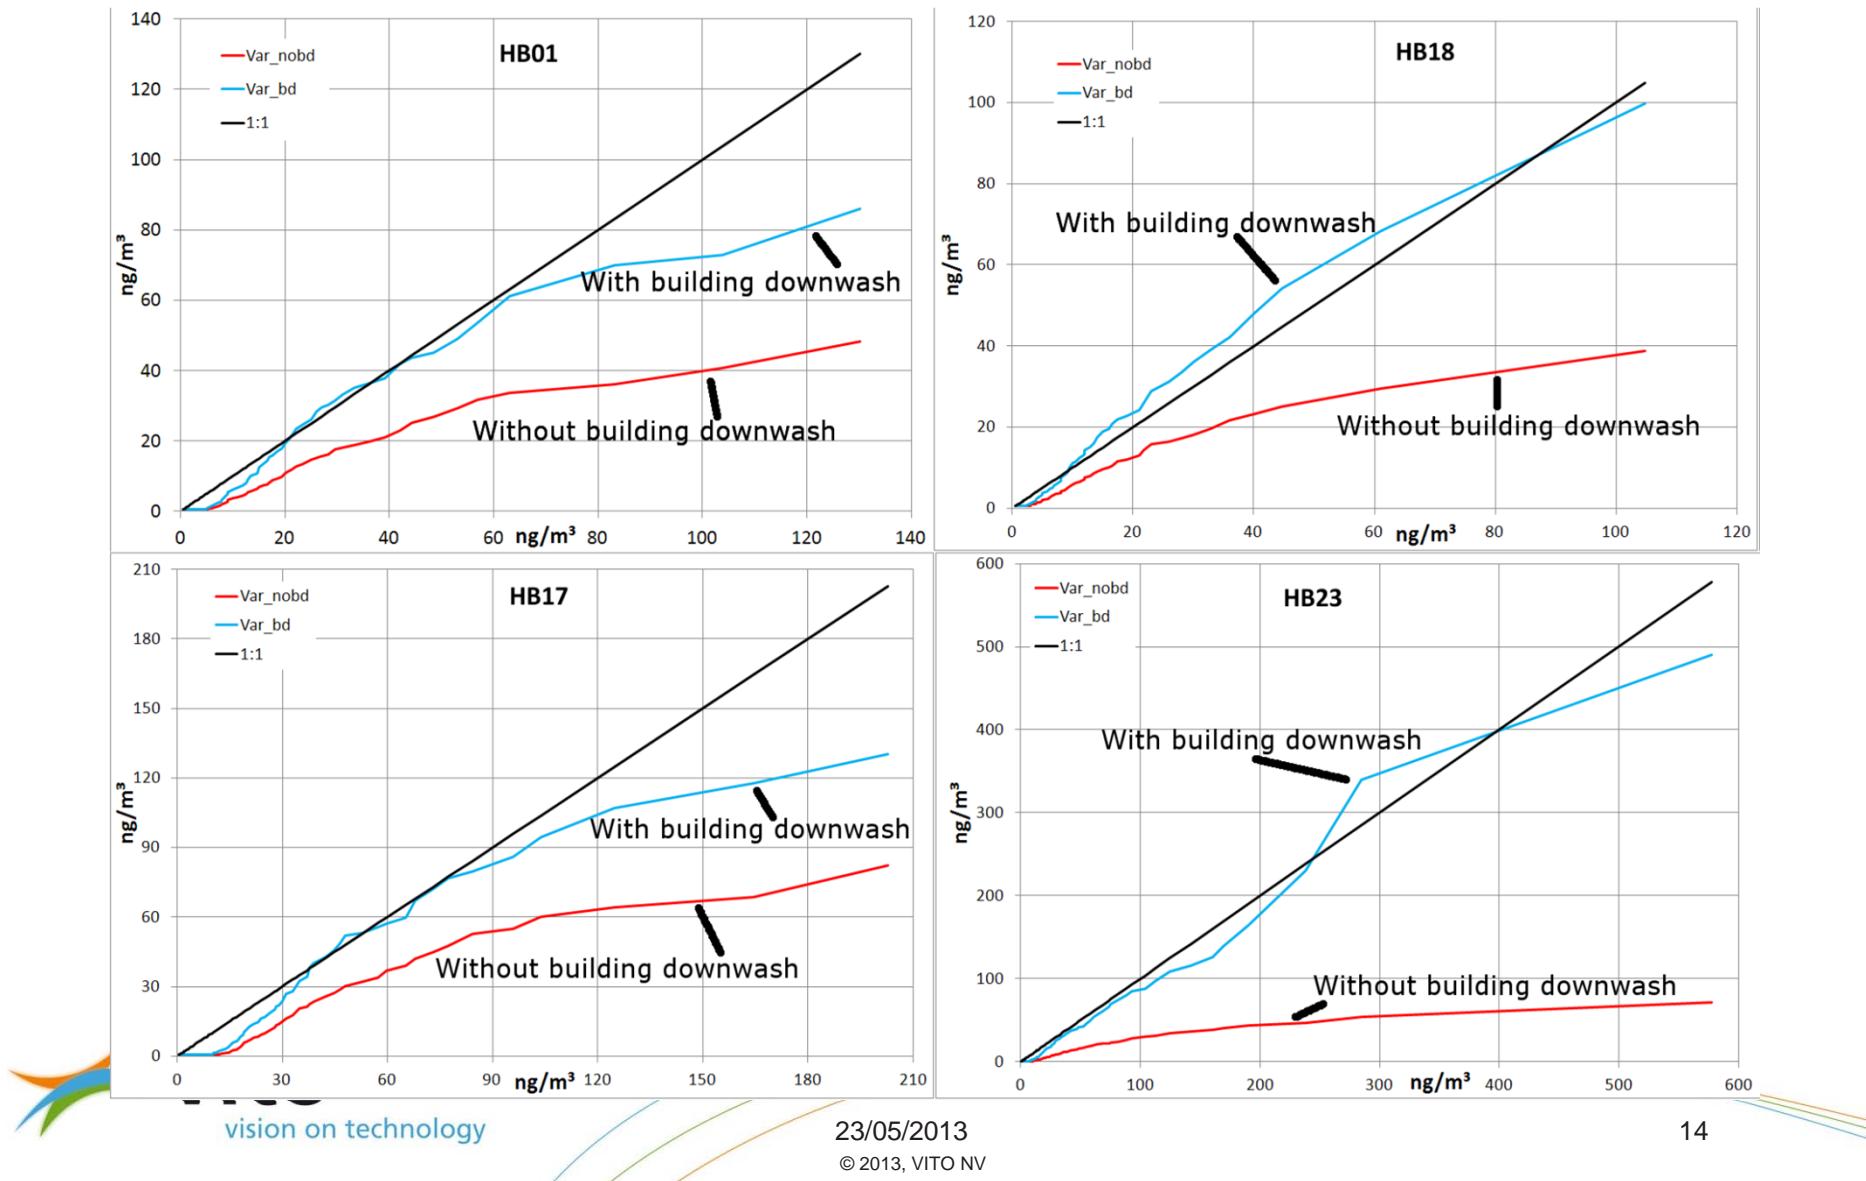

Validation

Lefebvre et al., 2013

Validation: Q-Q plots

Validation

	Year	Number of measurements	Period Average concentration (ng/m ³)		
Monitoring site			Measured	No building downwash	Building downwash
HB01	2010	358	16	6.6	11.9
	2011	364	14	7.5	13.4
HB17	2010	349	29	10.1	16.3
	2011	357	23	13.0	20.7
HB18	2010	364	9.6	4.6	10.2
	2011	348	8.8	5.4	10.8
HB23	2010	364	44	8.7	40.3
	2011	357	41	11.0	37.0

Conclusions

- » New building downwash model
- » Application on field data
- » Good validation
- » Model can be used for: regulatory purposes, exposure estimates, scenario analysis
